Web Service AlarmWorX64
[10.96.2 Critical Fixes Rollup 1 \(67Mb\)](#)

This critical fixes rollup pack contains fixes for ICONICS Suite, GENESIS64, IoTWorX, and Hyper Historian. Critical fixes rollups are designed to include only the most critical fixes to bring you the most stable product possible. There are few if any new features in a critical fixes rollup to help ensure stability.

Users should install a critical fixes rollup at the direction of technical support, if they are experiencing any of the issues described in the release notes, or if they want to increase the stability of their product. Although critical fixes rollups are designed with stability in mind, ICONICS encourages caution when applying rollups to systems in production that are not experiencing any issues, as any update - even a critical fixes rollup - contains some small measure of risk.

10.96.2 Critical Fixes Rollup 1 is designed to be installed on top of a version 10.96.2 ICONICS product. Critical fixes rollups are cumulative - it is not necessary to install the intermediate rollups, only the most recent one. Previous rollups do not need to be removed before applying this rollup.

The standard Critical Fixes Rollup 1 can be applied to 64-bit software, including the ICONICS Suite, GENESIS64, and Hyper Historian installations. It can be applied to a 64-bit Hyper Historian Collector. For 32-bit products, such as the 32-bit Hyper Historian Collector or 32-bit SQL Query Engine, please install the 32-bit Critical Fixes Rollup package.

To install 10.96.2 Critical Fixes Rollup 1, run `setup.exe` and follow the installation prompts.

To fully benefit from 10.96.2 Critical Fixes Rollup 1 changes, IoTWorX users must deploy the critical rollup to their edge devices. To deploy the rollup to an IoTWorX edge device:

1. If you haven't already, install 10.96.2 Critical Fixes Rollup 1 to the server where your IoT project is stored.
2. In **Workbench**, go to your IoT project.
3. Right-click on your device and choose **Configure Modules**.
4. Select the **Click to configure modules** link.
5. For **Version**, select **10.96.2 Rollup 1**.
6. Select **Deploy**.

Notes:

- 10.96.2 Critical Fixes Rollups can only be applied to a 10.96.2 system, **not 10.96 or 10.96.1**.
- The 10.96.2 Critical Fixes Rollup 1 (ISO Combined) download contains the contents of this download. It is not necessary to download both this package and the ISO.

See this link for resolved issues:
